Section 2.6 #2, 3, 5, 9, 12, 14, 16, 21, 24

HINTS:

There’s not too much to add this time—just study the examples in the text carefully! Note that, for example, not all problems involving logs and fractional powers use the “keyhole” type contour in Figure 2.17 p. 165; some use a contour like Figure 2.16 p. 160. You just have to try things and see what works.
