Postdoctoral Fellow Position in Polymer Chemistry for Additive Manufacturing

The Materials and Structures Laboratory at the University of Southern California is seeking a highly motivated postdoctoral fellow to carry out research in polymer synthesis and characterization for the additive manufacturing.

- The candidate should hold a doctoral degree in polymer science and engineering, chemical engineering, material science, or related areas. The candidate is expected to be familiar with polymer synthesis, modification, and characterization. Knowledge background in polymer physics and mechanics would be a plus, but not required. Experience in additive manufacturing is preferred, but not required.
- Good oral and written Engineering skills are required.
- The position with an initial one-year appointment will start in Spring 2018 and can be renewed based on performance.
- The application should send a resume, three representative papers, and contact information of at least 3 references to Prof. Qiming Wang (qimingw@usc.edu). More information about Qiming Wang group can be found at http://www-bcf.usc.edu/~qimingw/.
