Study guide Gujarati: Midterm

The following parts of the book are relevant. The rest can be skipped. The best strategy is to read the class notes first and use the book as a second take on the various topics.

Introduction and Chapter 1: all.

Chapter 2: all. Note that Gujarati uses a somewhat different approach to introducing the simple linear regression model than I used in lecture 5. If you find the approach in the lecture simpler stick with that, and read chapter 2 as an alternative.

Chapter 3: All. Skip the appendix.

Chapter 4: Skip 4.4 and the appendix.

Chapter 5: Skip 5.9 and 5.12. Skip the appendix.

Chapter 7: Skip Maximum Likelihood Estimators in 7.4, skip 7.10-7.11.

Chapter 8: 8.1-8.7. Skip references to ANOVA and use the equivalent approach in lectures 9 and 10 instead.
